

Who are we?

LEADERS IN SUSTAINABLE MANUFACTURING SINCE 1948.

Since inception, our ambition has always been to manufacture 100% recycled paper, an extremely progressive goal at its time.

WE WERE RECYCLING PAPER EVEN WHEN ALMOST NO ONE ELSE WAS DOING IT.

Over time, this vision turned into a recent shift, a part of our identity, as well as our commitment to innovate and the environment.

Today, we are market leaders who are continuously in the lookout for other areas in the industry where our products and services can be applied in a sustainable manner.

Like this, our vision & mission remains unchanged through the years.

Our values

(1)

RESPECT FOR
THE ENVIRONMENT

(2)

COMMITMENT
TO THE PEOPLE

(3)

CHANGE AS
A DRIVING FORCE

(4)

EVOLUTION
AS A CONSTANT

WE ASPIRE TO BECOME PIONEERS OF CHANGE AND EVOLUTION.

We set our eyes on becoming the leading entity on the market of 100% recycled and recyclable paper, plastic, and building materials.

For this reason, our manufacturing processes include strict recycling and environmental sustainability protocols to get zero waste in the shortest time possible.

Our Products

PAPER

In Alier, we manufacture more than just paper.
In fact, we manufacture 100% recycled, high performance
paper of certified quality.

(1) Carton Wall®

Carton Wall® is a 100% recycled paper for Plaster Board Liner (PBL). The high quality of Alier's paper confers the PBL board with the mechanical and structural strength required by our customers.

FRONT:

Standard board (160 - 210 gsm)
High Performance (140 - 160 gsm)
in ivory, green, pink, blue, yellow.

BACK:

Standard board (150 - 180 gsm)
High Performance (120 - 140 gsm)
in grey, pink, green.

PBL PAPER:

Paper for standard board (ivory & grey).
Paper for fireproof board (pinkish ivory & pinkish grey).
Paper for waterproof board (greenish ivory & greenish grey).
Paper for acoustic board (blueish ivory & grey).
Paper for high resistance board (yellowish ivory & yellowish grey).

DIFFERENT WHITENESS PAPER

The best quality 100% recycled paper for PBL, with different grades of whiteness.

Carton Wall Ivory White Plus (62% whiteness).
Carton Wall Ivory White Top Liner (73% whiteness).

HIGH PERFORMANCE PAPER

The high-performance paper manages to have the same resistance and Alier's quality as the standard carton wall, but with a lower grammage. In this way, the reels have more meters per tone. That means you get more m2 of plasterboard using with the same reel, saving time in transitions between reels, manufacturing lighter boards, and saving costs in transportation and import charges (you need less trucks / containers per year).

HIGH BOND PAPER

Designed specifically with the specifications required by the UK market.

ANTIFUNGAL PAPER

Designed to prevent fungal growth in humid areas or near the coast.

ANTIBACTERIAL PAPER

With the same properties than the antifungal paper and also prevents bacterial growth, which makes it perfect for building applications in hospitals, schools, etc.

(2)

Kraft Bags (70 gsm - 140 gsm)

A wide range of 100% recycled paper for the manufacture of bags with the highest quality and resistance standards for the production of shopping bags, delivery bags, among other uses. Kraft Bags are made with a paper with high machinability, which allows achieving great productivity and efficiency in its production.

CERTIFICATIONS

In addition, we have an ISEGA certification for contact with non-greasy and dry foods, as well as by PEFC and FSC.

(3)

EcoKraft Bags (70 gsm - 140 gsm)

100% recycled paper of great resistance that competes with virgin papers on the market. Ideal for the manufacture of supermarket bags and e-commerce envelopes.

CERTIFICATIONS

That is why we offer boxes and envelopes of various sizes and for different uses. Made with 100% recycled paper and with the ISEGA certificate of paper for contact with non-greasy and dry foods, as well as by PEFC and FSC.

(4)

EcoKraft Sacks (70 gsm - 140 gsm)

The quality and strength of our 100% recycled paper is put to the test with the open-mouth sacks. This product is the most suitable for coal, sepiolite, potatoes, animal feed, and other agricultural materials.

(5)

Semi Extensible (70 gsm - 140 gsm)

Paper with 100% recycled fibers for the manufacture of sacks and bags with valves, filled under pressure. Ideal for the production of bags for construction materials.

WHAT IS VAPA?

VAPA is the acronym of **Value Added Paper from Alier**.

This is a concept created to explain to our customers the commitment we have to them and to the environment.

This service goes beyond paper alone. Through VAPA, we provide companies with the help they need in production management, thereby leading to a reduction in costs, excesses, and emissions. We put our experience and knowledge at your service to achieve a production that is more cost-effective and much more sustainable.

What do we achieve?

- + Prevention of production and end product defects.
- + Energy saving.
- + Minimization of waste and rejection.

We also join hands with our customers in creating products with more added value, providing our assistance in commissioning operations to validate the proper start-up of a new production line. We offer long term advisory services in new product development, high quality services with added value, and a safe and environmentally friendly work environment.

Present

R&D&I

Evolution occurs by implementing beneficial changes to a process, and in Alier, we strive to become a force that drives these changes.

Investing in **R&D&I** is essential because we believe in a different future that is sustainable and eco-conscious. And this means evolving day after day.

As a result of our knowledge in the recycled paper sector, our customer commitment, and the high quality of our products, new products are in development, for meeting the special needs of our customers.

The main fields of research in Alier are as follows:

Development of new products.

INNOVATION IS OUR ESSENCE.

The pursuit of formulas for waste transformation and/or minimisation.

THERE IS NO EVOLUTION WITHOUT SUSTAINABILITY.

The search for systems to reduce or transform utility, electric, gas and water consumption needs in order to achieve decarbonisation in the shortest time possible.

THE FUTURE STARTS TODAY.

Future

SUSTAIN- ABILITY

Our production system is by nature responsible for one of the basic pillars of the circular economy. For us, the zero waste of our manufacturing system is not a challenge, it is a reality.

DOUBLE
ZERO ROLE,
AT THE HEART
OF THE CIRCULAR
ECONOMY.

New Challenges

RECOVERY, RECYCLING & VALORIZATION OF PLASTICS

Motivated by our commitment to the environmental and sustainable economic development, in 2019 we started a project to recover plastic waste that aims to achieve zero waste. Nowadays is not longer a challenge cause we are creating new ways to valorize plastics as one of our business branch.

New Challenges

HIGH EFFICIENCY ENERGY

At Alier, we try to generate the minimum possible impact on the environment.

That's why we have a high-efficiency cogeneration plant that allows us to produce electricity and heat and reduce harmful emissions and is working with renewable energy.

We also have projected a biomass plant and a solar energy field that allow us to achieve a total decarbonization in 2025.
